## MORE THAN JUST A FRACTIONAL CISO

Cyber threats are evolving, and businesses need experienced cybersecurity leadership to stay ahead. However, hiring a full-time Chief Information Security Officer (CISO) isn't always practical or cost-effective.

**Pro CISO®-as-a-Service** gives you the best of both worlds: dedicated security leadership, with access to a pool of experts in their domains, without the full-time expense.

Unlike traditional fractional CISO models, we provide a senior CISO as your primary contact, backed by a team of cybersecurity specialists to cover all areas of security, compliance, and risk management.

## A SMARTER APPROACH

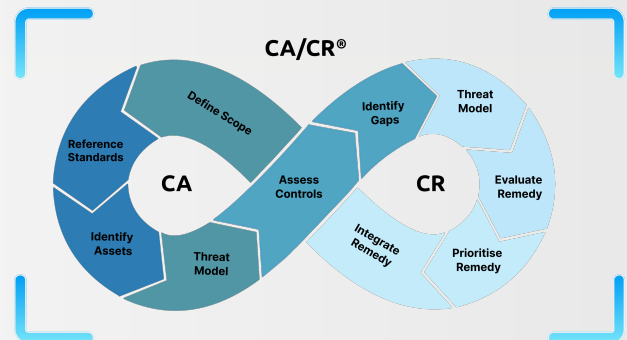

Cybersecurity spans many areas, from risk management and compliance to security operations and incident response. **No single person** can be an expert in everything, which is why our model gives you access to a team with deep expertise across different domains.

We align our approach with industry standards such as:

- **ISO 27001:2022** – Covering organizational, people, physical, and technological controls.
- **NIST Cybersecurity Framework 2.0** – Focusing on Identify, Protect, Detect, Respond, Recover, and Govern.

By combining strategic leadership with hands-on expertise, we deliver comprehensive security solutions at a fraction of the cost of hiring an **in-house CISO!**

## THE CA/CR® METHODOLOGY

At the core of our service is our proprietary CA/CR® methodology (Continuous Assessment / Continuous Remediation) - a practical, structured approach to cybersecurity.

### **Continuous Assessment:**

We conduct regular security reviews, identify risks, and ensure compliance through Threat Modeling.

### **Continuous Remediation**

We address security gaps with a structured improvement plan, implementing changes in short, iterative cycles.

### **Scalable & Adaptive:**

The process starts with a focused security scope and expands as your organization's needs evolve.

This methodology ensures that security improvements are consistent, manageable, and aligned with business priorities.

## THE ROLE OF THREAT MODELING

Threat Modeling is a key part of our cybersecurity strategy. It helps organizations anticipate potential attack vectors and understand how adversaries might target their systems.

- **Identify & Prioritize Risks**

We map out your organization's threat landscape to focus security efforts where they matter most.

- **Proactive Security Planning**

Instead of reacting to threats, we work to prevent them before they happen.

- **Integrated Security by Design**

We embed security into your organization's workflows and technology stack.

By making **Threat Modeling** a part of your cybersecurity program, we help strengthen your defenses and reduce risk exposure.

## WHY CHOOSE PRO CISO®-AS-A-SERVICE?

- A senior security expert to manage strategy and stakeholder engagement, always at your fingertips!
- A team of specialists with experience in multiple cybersecurity fields.
- Tailored strategies integrated with our CA/CR® methodology.
- Support for ISO 27001, NIST, GDPR, NIS2, DORA, and other security frameworks.
- A cybersecurity program that evolves with your business needs.

## STRENGTHEN SECURITY WITHOUT THE COST OF A FULL-TIME CISO!

With Pro CISO®-as-a-Service, you gain expert-level security leadership that is both flexible and cost-effective, as well as optional integrations with tools like Slack and Teams to improve efficiency and simplify security operations!
